

ONE COMPANY, ONE MISSION – *DELIVER THE BEST PUBLIC ACCESS DOCK SYSTEMS!*

**Over 107 years experience
building public access dock systems in 27 states.**

No matter what your public access project calls for we can help you put it on the water. Whether it's a service, gas, fishing, storage or courtesy dock, Meeco Sullivan's docks and platforms will provide a solid and safe foundation that will last for decades. Our galvanized steel, timber and aluminum dock systems and platforms are designed and built to provide maximum safety and durability for freshwater or saltwater environments. Large ADA accessible gangways can be included as well as chases that make it easy to install any utility services. Plus, boat slips can be easily integrated into every one of our designs if needed. Bring us your idea and we'll show you the best way to put it on the water.

We make it. We stand behind it.

With a legacy of 107 years of experience designing, building and installing thousands of marine projects, we've learned how important it is to stand behind every product and every installation. Our customers always expect the best and we are committed to delivering the best. You not only get the highest quality marina or dock system but we deliver on time and within budget. And we stand behind it. Just ask our customers.

Proud Supporter of

You Can Count on Our Experience Every Step of the Way.

GALVANIZED STEEL SYSTEMS

Flooding Rivers, fluctuating reservoirs, frozen lakes ... our galvanized steel systems deliver an unmatched record of performance, durability and longevity. One reason is the superb strength of its box truss steel frame. All frames are hot dip galvanized after fabrication to eliminate unprotected surface areas and extend their long-term resistance to rust. For covered systems our Meeco Sullivan roof panels offer our exclusive "Six Inch Ridge" design for higher roof live loads and fewer support columns. This makes Meeco Sullivan dock systems more spacious and less cluttered for easier, safer access. With over 50 years of proven performance, our galvanized steel system is the inland marina and dock system by which all others are measured.

TIMBER SYSTEMS

The clean and natural beauty of wood is so popular because it complements the natural surroundings of a public access site and enhances the appearance of any dock system. Our time tested and storm proven engineered timber dock systems are ideal for both saltwater and freshwater environments. We offer a wide variety of framing, flotation, decking and connection options to meet almost any site condition and only the best materials go into the construction of every timber system. Super-strong and stable, yet flexible and forgiving, these systems have withstood some of mother nature's most brutal conditions for decades. Meeco Sullivan's timber dock systems are the system of choice for the most diverse conditions across the country and around the world. To see all of our timber dock systems please visit meecosullivan.com.

ALUMINUM SYSTEMS

Aluminum is lightweight but very strong. A properly designed and fabricated aluminum system can be a handsome and resilient dock system alternative. When you choose our aluminum dock system you'll get a dock that is corrosion resistant and can be used for fresh or saltwater environments. These dock systems are available with a wide variety of decking options and we also provide a full range of aluminum ramps and gangways. To learn more about our aluminum docks, ramps and gangways, please visit meecosullivan.com.
